History of AutoCAD In 1982, Autodesk began the development of AutoCAD, also marketed as "AutoCAD 1.0". The development team focused on a single, common architecture and user interface that would be usable by all types of users on a variety of computer platforms. AutoCAD was originally distributed as a floppy disk image and later a MS-DOS executable file for 286/386-based PCs. AutoCAD would become one of the most popular applications ever developed for MS-DOS, with more than 40 million copies sold. The AutoCAD 1.0 release (1982) included the first version of the AutoLISP programming language. On August 2, 1985, AutoCAD 1.5 was released, which introduced the first version of the integrated Windows-based GUI, including the Ribbon, Object Navigator, and the Command Bar. AutoCAD 2.0 (1988) included a program called "Drafting Tools", which provided basic drawing tools and allowed users to easily change the default screen size, font size, color, and grid line. AutoCAD 3.0 (1990) included the ability to load and edit DWG files. With AutoCAD 3.0, it was possible to open more than one file at the same time. The arrow tool was also included, which allowed users to edit the drawing coordinates of the active object. It was now possible to group, order, and center objects. AutoCAD 4.0 (1992) included the ability to place points, lines, and ruler grid lines. Other new features included the ability to apply built-in AutoCAD extensions and to use a mouse in lieu of a drawing tablet. AutoCAD 5.0 (1994) included a new user interface called "Express Tools". The "Sketch Up" feature allowed the user to create isometric projections, 3D wireframe models, and orthographic views. The "3D Warehouse" allowed users to connect with other users or share information. Users were able to name their objects, open and close files, group, and label objects. AutoCAD 6.0 (1995) included several new drawing tools. The "Basic Tools" allowed users to move, scale, rotate, flip, and mirror objects. The "Template" feature allowed users to create their own standard toolbars and work areas. The "Object Linking and Embedding" feature allowed
