Desktop, tablet and mobile apps and browser-based, in-browser, mobile and web apps running on multiple platforms including Windows, Mac OS X, Linux, Android, iOS, Windows Mobile, BlackBerry OS, and Windows Phone. The AutoCAD mobile app provides 3D and 2D CAD drawings on mobile devices. Tablet apps (iOS and Android) allow you to connect to your PC and access AutoCAD drawings, with the ability to pan and zoom the drawing. Browser-based (iOS, Android, and Windows), in-browser (iOS and Android) and mobile (iOS, Android, BlackBerry, Windows Mobile) AutoCAD applications allow you to connect to your PC from any Internet-enabled device with Web browser, and view the drawing and annotations. You can search, filter and annotate drawings from your PC to a drawing created in your mobile device. Mobile and web applications are available in various languages. Working with AutoCAD has evolved since its early versions, and AutoCAD is now available as a multi-device collaborative environment that allows you to create, edit, share, and view drawings on any device. With AutoCAD, you can create, edit, and annotate 2D and 3D drawings on the desktop, tablet, web, or mobile device. Using an AutoCAD drawing on a mobile device is useful for AutoCAD field service and installation teams and during product development. For example, a field service technician may use the AutoCAD mobile app on an iPhone or Android device to create and view the 3D drawing on a field trip. When they return to the office, the technician may use the mobile drawing to create a document or create a new drawing. Before you create your AutoCAD mobile project, you need to install AutoCAD on your PC. Microsoft Windows You can download the AutoCAD app from the Apple App Store or Google Play. The AutoCAD Mobile app is available in the Windows Store. If you already have a project file (the AutoCAD drawing file), you can create a new drawing by importing the project file. If you do not have a project file, you can create a new drawing by importing a CAD file. The app may open the AutoCAD project file if it exists on your device. Mobile apps are not available in AutoCAD LT. iOS and Android devices If you have an

## What's New In AutoCAD?

Automatically create text and arrow objects from incoming feedback. This feature automatically inserts a new text object for every line, surface, or closed polyline where the value for the new text or arrow object changes. (video: 1:42 min.)

Automatically combine the height and width of incoming text objects or arrow objects. For instance, if you draw a rectangle and a rectangle with text "Text(1, 0)", this new tool combines the height and width and places a new text object in the shape. (video: 1:57 min.)

Extend the Layers feature by showing multiple layers in 2D and 3D. Now, you can show multiple plan views of the same model, and you can have a 3D layout at any scale, on the same drawing. (video: 1:12 min.)

Create stable, reliable, and useful drawings. Now, AutoCAD remembers the most-recently used (MRU) tool settings on your computer. (video: 1:42 min.)

Create a comprehensive help system. Easily send a URL to any help topic, bookmark a help topic, or download the most-recent version of the help contents. One-click approval on non-navigation tools. You can approve or reject all visible changes at once with just a single click. (video: 1:12 min.)
