Like other applications in its class, AutoCAD's primary function is to create 2D diagrams that designers use to create and analyze physical structures. For instance, architects create floor plans using a form of 2D architectural design called the building code-compliant wall, roof and floor system. AutoCAD is also used to create 2D engineering drawings, called technical drawings. These technical drawings are used to make precise architectural, structural, mechanical and electrical designs. AutoCAD has been developed to operate over a broad range of graphics technologies, including color laser printers, monitors, X-ray film readers, plotters, projectors, tablet PCs, and networked systems. AutoCAD is also able to display images captured from cameras, scanners, and medical X-ray systems. Five Things You Must Do If You Want To Be A Successful Entrepreneur Being an entrepreneur isn't for everybody. Some like to follow the rules, some like to be free, and others just want to make a few bucks. We're not here to talk about what kind of entrepreneur you are, or what kind of entrepreneur you are not. But we will say, you have to take an entrepreneurial attitude. You have to have goals, and you have to work hard for them. This means that you have to do things that people don't expect. If the crowd is in the store you are walking through asking, "What do you need?" but when you get to the checkout lane, you are asking them, "What do you want?" These are things you should ask yourself every day. We have chosen five things you must do if you want to be a successful entrepreneur, but they apply to any business and any profession.

1. Have a killer idea You have to have an idea, and you have to be able to make it happen. This is the thing that gets all of us started. If you can't visualize an idea, then it doesn't matter how brilliant your idea is, it is not going to happen. So when you are thinking about your ideas, you need to see them come to life in your mind. It's not like walking around with an idea in your mind. It is better to actually see it.
2. Create a brand Once you have an idea, you need to think about how you are going to brand it. When you brand it, you create a logo, and you put your name in it. This is how people are going to
