 Microsoft Windows Server 2012 R2 Microsoft Windows Server 2012 R2 is the new edition of the server from Microsoft. It is
 positioned as a universal platform designed to automate various work processes, including the creation of data centers. The system
 is aimed at the corporate segment and can be scaled up and down to meet the company's current needs. Product Features Microsoft
 Windows Server 2012 R2 offers users a wide range of features and functions to extend functionality. These include: the ability to
 be deployed in different environments; maintenance of multiple servers at once; enhanced security due to the presence of the
 Kerberos authentication protocol; easy installation and administration of the system; high speed of the system operation; availability
 of services within any of three security levels (personal data, web resources and applications); support of all popular browsers;
 automatic detection and blocking of viruses and vulnerabilities in the system; Java technology support; flexibility to configure and
 add new services; ability to create your own database of login credentials; ability to use various system management tools To use
 the program you must first create an account. To do this, place the cursor on the "Create new user" tab (to the right of the "Add
 new user" button) in the program window. Click on this button, and the "Username and Password" entry window will appear:
 Specify the user's first name, as well as the name under which the user will be visible in Windows and on the monitor screen. For
 example, you can enter your first name, last name, and middle name, or you can leave it blank. Then enter the password.
