INNOVATIVE WORLD OF HISTORY OF NEWSPAPERS AND ANTIQUES - The World of History of Newspapers and Antiques More details but still it will download everything that is marked as "download.com" I can't find where I downloaded this this. any one know? This is the only time i have ever seen this. I want to say it was install.com and maybe that's why it's not letting me delete it or anything. A: The file you download is called "autosim-200.exe" and is a Microsoft Windows program.

If you are unable to delete it try searching your computer for another file with a similar name, however, I suspect it will be found in the same folder as the autosim-200.exe Q: How can I use HTML or PHP to display the directory structure of a directory on a site? Say you have directory tree like: images |-- divider.png |-- picture.png How can you use HTML or PHP to display the image paths. I want it in a block of html: I've tried many combinations to no avail... can anyone help? A: Use the DirectoryIterator class. A: dirsTree will work for you. See more at PHP dir loop? Q: Add schema to existing database using Hibernate I have an existing database (Oracle), which has a schema name.

When I want to use this database with Hibernate, I have to insert it in the class that uses this database. Is there any way to do it without creating another DB connection and adding database to it? A: Hibernate does not support a DB2 schema. When using Oracle Hibernate you need to add the schema. Maven The following is the pom.xml for Maven dependency for the oracle driver com.oracle
