See Chapters and for tips on saving your images in Photoshop. * * * PACKERS AND MOVERS To move an image from one location to another within Photoshop, you can either use the Move tool (located at the top of the workspace) or use the Free Transform tool. The Move tool can be very useful when you're working with a layered file in Photoshop. It's like having a cursor that works across layers, allowing you to move objects on one layer onto another. For example, if you want to crop an image so that your eyes are not seeing the edges of a hole, you could move the object you're cropping to a new location. Or, if you want to reduce the amount of space in the top and/or bottom of a picture, you might crop to a smaller area — for example, a horizontal crop when you're processing a landscape image or a vertical crop when you're processing a portrait. Moving an object to a new location is one of the most common uses for the Move tool. You can use the Free Transform tool to move elements around within a file. This tool transforms the object that you're moving in the direction you're pressing on the tool. The size of the object doesn't change, but its position does. And you can even work with several objects at one time using the Free Transform tool. In fact, you can move objects from one part of a layer to another part of the layer, including using the Free Transform tool and then choosing a path selection tool such as the Paths Selection tool, the Polygonal Lasso tool, or the Pen tool. You have many more options for moving or transforming layers in Photoshop. The next few sections cover these options in detail. * * * Using the Move tool To use the Move tool, follow these steps: 1. Select the Move tool, which is at the top of the workspace. You see the cursor turn into an arrow. You also see a preview of the object you're moving in the lower-left corner of the window. 2. Choose the object you want to move. To move the image, click in the upper-right corner of the window and drag the image. Release the mouse button when you're where you want the object to be placed, and then release the mouse button to have the image appear in that location. 3. After you place the

It is reasonable to assume that Federal courts are required to apply, as a prerequisite for any declaration of rights, some of the procedural safeguards contained in these laws. The Refine Edge tool allows you to adjust the appearance of the endpoints of lines and curves. The Eraser tool erases parts of an image. The Spot Healing brush can be used to fix small parts of an image. The Burn tool is used to lighten or darken parts of an image. The Dodge tool works like the Burn tool but affects contrast. I present the Mocha collection, an eBook collection of all books I have published with full-color images. This new collection is available for both Kindle and Nook. The library of nearly 80 books contains a large collection of photography-specific books and books about photography. The Mocha collection is available for Kindle and Nook from Amazon.com. Since I started the Mocha Photography series of books in 2001, I have published seven books. Each book contains dozens of color photographs, a short description of the images and information about the background of each image. The Mocha series and its books are written in a very small and friendly manner, making it easy to read. I have been pleased with the number of books and how much interest they have generated. If you like this type of photography, but are unsure of where to start, you should definitely have a look at my Mocha series. Are you searching for a guide, book, or e-book that is a little bit more academic and talks a little bit about the theory and the art of photography? Then check out this article from PetaPixel. If you need a little inspiration for landscape photography, then look through my New Moon series. It will give you some ideas, tips and techniques to get some really wonderful landscape images. Photography is something I do to make a living, and so I use it constantly. However, I have gotten into photography through artistic pursuit. I do not own a camera — I rely on other people who are paid to create images. I do own an Apple computer with Photoshop Elements and a small arsenal of DSLR camera, lenses and flash. But I do not own a camera or a camera bag — I rely on others who can take
