Dhyanthi Dasan is a young, self-possess, and humorous film director.(1) Field of the Invention The present invention relates to packet-switching technology, and more particularly to a device and method for detection and correction of error bursts in a packet-switching network. (2) Description of the Prior Art An error burst is a sequence of incorrect data which is erroneously transmitted through a packet-switching network. A particular error burst is a burst of data having an incorrect sequence of bits, in which all but one of the bits are correctly transmitted and one of the bits is transmitted in an incorrect order. The erroneous bit(s) in the error burst is/are

the bit(s) which causes the error burst to be detected, and is/are not necessarily the bit(s) in the error burst that actually cause the error. In the past, error detection and correction systems have concentrated on detecting and correcting individual error bursts without providing for an automatic detection and correction of error bursts. This is due to the fact that, although error bursts can be detected and corrected, it is impossible to detect and correct the error burst sequence, without measuring the signal-to-noise ratio (SNR) of each successive bit in the error burst. Unfortunately, with signal bit error bursts, the signal-to-noise ratio does not remain constant and, as a result, the SNR of the signal is very low relative to the noise at the start of the error burst. As a
