The day started well for Watford with Will Hughes and Harvey Barnes putting Watford ahead. With a goal in the opening minutes, Barnes has been great so far in pre-season and it would only be a great signing for Bournemouth if he can stay at Watford for the next four years. Brentford's Billy McKinney equalized for Dean Smith's side, but it would not be long before the home side would take the lead. Jack Marriott put them in front with a lovely free kick, and the impressive Tom Cleverley is given a deserved start ahead of Craig Cathcart, last season's joint top scorer. Having failed to find the net at Bournemouth, Ben Watson comes into the side up front in place of Etienne Capoue. Bournemouth are in the perfect position to take the lead, but Adam Smith can hardly celebrate a second goal of pre-season. The move is much better organized than the first goal, and Guido Carrillo is unmarked at the back post to bring Watford level. A good way of combating this was to switch Cleverley to central midfield, so the Bournemouth side is much more fluid. Fears are starting to run that Watford's form has been suffering without the impressively creative Etienne Capoue. I think the answer is that this is simply a good strong side, and there was not a lot of balls played down either flank. Instead Watford look like a team playing with confidence and rhythm, which was not the case in the London Stadium until the first half was out. Their best spell of the game was in the second half, which includes a great pass from Keshi to Barnes for a one-two in the face of the Bournemouth defense before his shot cannoned off the crossbar. It is the sign of a team with a lot of confidence. With a golden chance to win the game against a tired Bournemouth side, Keshi has a few moments of skill before Hiram Boateng's well-hit shot is saved at the feet of the goalkeeper. Cleverley gives away a free kick for a highly undeserved challenge which was brilliant, and with his first touch brings down Watford in stoppage time, but the referee blows the whistle. Watford are

New Orthotics With new orthotics, the goal is to get your foot functioning to its normal state as soon as possible. When you are walking, a new orthotic helps to

lessen any pressure on the plantar surface, which might be a contributing factor to plantar fasciitis. This allows the foot to heel strike more gently and gets you back in a normal position as soon as possible. Theoretically, a shoe insert should always be placed in the shoe that you are using while you are working out, but depending on how severe your case is, we will have to look at what kind of orthotic would be the best fit. Heel pain, such as plantar fasciitis, can make it very difficult to do any work out, even working out with plantar fasciitis is something that is not very fun. Common condition Plantar fasciitis is a very common condition that is caused by pain in the heel and the lower arch. The pain is made worse by standing or walking as the fascial band that runs through the arch is stretched. If you are feeling pain at the end of the heel bone, you may have a heel spur, which is actually a growth of tissue from the bone. Plantar fasciitis is easily treated and a heel shoe insert is a good way to get rid of the discomfort. Tendonitis Tendonitis, also known as tendonosis or tendinitis, is a swelling and inflammation of tendons, which are cords of tissue that attach muscles to bones. Common locations include in the hands and wrists, the elbow, the neck, the shoulders, the knees, the ankles, and
