
Gv License Manager Error Code 15 0 0 !FREE!

How do I write a large (> 2 GB) variable to a netCDF file?... When running ncl version 5.2.0 , I get the error "warning: ut_calendar: Invalid specification..." I can't figure out what that means. I understand this is a warning because it doesn't exist in my specs, but I can't create a netCDF file with this error. Does anyone know what could be causing this error? I am using NCL 5.2.0 with Microsoft SQL Server 2008. Thank you in advance This is a warning because there is no netCDF file. No netCDF file is what you write. When you say you are using NCL 5.2.0... it means you created your netCDF file in NCL.
