Comments can be to individuals or to groups, and include text and links. Each comment comes with a credit link, so you can add a note to an individual, and someone else can reply from the Comments panel or from Photoshop Elements. If you're using multiple monitors, you can collapse the comments panel on each monitor. The comments/reviewer wish list – that is, the most useful items for a particular reviewer – are displayed at the top of each comments panel. Click the cross in the upper-right corner of the comments to collapse all comments panels. Adobe Photoshop has become the industry standard for photos. It helps you to make better pictures and has a storied history. While Photoshop may be powerful, powerful editors can be intimidating. It's a tool for pro photographers, not minor image editors. If you are looking to get into creating your own photography, Photoshop is a great place to start. There is a lot to learn, but it has helped many photographers master the craft of photography.

The Photoshop on the web option will include all the top industry-leading features users typically rely on in Photoshop. We will be able to leverage Photoshop's power, collaborate with other designers, and do stuff that Photoshop can do, without having to buy a full version of Photoshop. Because Photoshop needs a machine to run and is therefore time-consuming to run and to learn, Photoshop on the web is an optimized version of Photoshop that runs fast and beautifully on any device. Although much of the core feature set remains the same, the web-based version does not include extensive support for industry-leading features such as the Content-Aware and Liquify filters, but will still be able to deliver some tools and results that you would expect in Photoshop. You can use the features in your web browser even without an active Creative Cloud subscription, so long as you keep your data up-to-date. If you access the CS6 web features completely offline, you won't be able to save your work, export the layers, or save the resulting projects back to the hard drive. In other words, you won't be able to export to a new Photoshop document or use the layer tools available in Photoshop CS6. For more information on safely working with content in your browser, check out these articles: The Future of the Web: Adobe Photoshop and Work Safely on the Web. Beginning in late 2019, the team is making available a new version of Photoshop that will feature all current and future features, but will be available without a Creative Cloud subscription. The free version of Photoshop on the web will be tied to the Web App tool in Adobe Creative Cloud. You'll be able to use any printer or desktop-ready device and enjoy the benefits of Photoshop for free. Devices such as Android phones, iPads, and Mac laptops will *not* be able to run Photoshop on the web. There will be no access to stack the artboards, layer and selection tools, colors, effects, lighting, paths, or type tools.
