What's New In SynaptiCAD EDA Suite?

SynaptiCAD EDA Suite is a software suite for the design of electronic systems with timing constraints. The TestBencher application provides all the tools required to automatically test the functional correctness of your system for timing violations with minimum effort. SynaptiCAD EDA Suite does not contain a simulator or an interactive simulator. The waveform component automatically determines the critical paths of your system. You can use the tested system to automatically generate a timing diagram with TestBencher or Viewer. The Suite includes the following applications: SynaptiCAD SynaptiCAD is a visual EDA software used to create PCB design documents, schematic design, BOM, and PCB layouts. It provides a powerful set of visual tools, in addition to intelligent drawing capabilities and customizable editing modes. TestBencher TestBencher is a timing simulation and validation application that offers unique graphical representations of the timing-related components of a system. It allows you to define specific timing constraints for individual signals (pin, net, or component), and to verify the functional correctness of your system under these constraints with minimal effort. WaveForm WaveForm is a software application that is used to automatically determine critical paths and to verify timing margins. Gigawave Viewer Gigawave Viewer is an EDA Viewer application that can be used to display waveform diagrams automatically generated by TestBencher.
