For example, you could re-use your photo editing in mobile web editors like Pixlr (iOS), Pixabay (web), or the jpeg editor in the browser (Mozilla choo choo!). When it's more than that, like when it's photo editing for the Web in Photoshop, the iPad and iPhone are more handy for quickly editing content, but you're still usually sticking to a Mac to finish the work. I started out with Aperture preset. Looked pretty good, but some of the preset degradation existed (lens vignetting, lack of sharpening, etc). I'm also used to undoing any mistakes my first time through an edit this way; with Aperture Pro, it's a little clumsy to undo the changes. But again, I'm used to the workflow—Photoshop isn't as consistent.
