Photoshop has added an auto-save feature for Smart Objects using save as plugin. With this, you can make changes to the smart object and can easily save the changes before closing the file, even when no need for your users. It can be used by users to save the changes using the one click. Thus this enhances the saving process for users. The revamped Photoshop is now able to edit RAW images natively. It has a 3D Design feature where objects are not only saved and exported to 3D files like Anaglyph, instead of exporting it as a JPEG. Photoshop is now using a new content-aware fill feature for objects so as to give the fill automatically in black. In addition to the Elements.app for macOS, there is a new Photoshop standalone app for macOS using the Adobe Creative Cloud platform. With this app, you can work on an image or video straight from a cloud-based system. You can also save a document to your Mac's desktop to access later. Adobe Photoshop also includes Photoshop Rush, which has a free version, a new and innovative tool that can combine multiple Photoshop documents and produce a single image with adjustments you can fine-tune at the last moment. Although a little time-consuming initially, it works like this: You open a new Photoshop document and change it to use the same presets and adjustments as another Photoshop document in your collection or a preset in Photoshop. After that, you can continue working in a mobile version or link Photoshop documents. An Adobefiles tutorial video(Opens in a new window) explains the feature.
