What is AutoCAD for Windows? AutoCAD is the software used for designing commercial architecture. Although it is an integral part of architectural design, it can also be used in all kinds of other areas of architectural design: to create architectural drawings and plans, such as for construction and engineering; to produce perspective drawings and three-dimensional (3D) models; and to produce engineering designs (also known as specifications) for engineering drawing. Why Use AutoCAD? AutoCAD is intended to be a CAD/CAM/CAE software program. There are other CAD/CAM/CAE software programs available, but AutoCAD is the most comprehensive CAD/CAM/CAE software on the market. Autodesk AutoCAD CAD/CAM/CAE software is ideal for architects, engineers, and other designers who work for themselves or in a small or medium-sized company, such as local businesses, neighborhood improvement groups, professional organizations, and contractors. AutoCAD is ideal for the design of anything ranging from small offices and single family homes to large apartment buildings and major building projects. In addition to the use of AutoCAD for the creation of designs, this software can be used for animation (video/computer) and 2D photography. A properly trained person can do more with AutoCAD than with just about any other design software. And because AutoCAD is a top-notch software application, design studios will often hire people with no background in design because they are well-trained in AutoCAD. Software Features AutoCAD has built-in features that make it unique from other software applications. 4D functionality and CAMERA support AutoCAD uses the concept of the 4D drawing. The 4D drawing is a three-dimensional (3D) drawing with a second dimension, which is time. Thus, a 4D drawing can be viewed from any number of angles and in any order. This second dimension, time, is called the 4D. The term 4D is often used to describe the animated 3D drawings made possible by a

We next determine whether the respondent's failure to comply with section 45-7-120(1)(a), MCA, before the effective date of the order is fatal to its validity. Section 45-1-205(1), MCA, provides: Notice in the case of an order to issue a notice in lieu of the required security. If a public service or utility corporation has been required by the commissioner to issue a notice in lieu of the security as provided in this chapter and has failed to do so before the order to issue the notice is made effective, the order will be valid only if the notice has been issued before the order is made effective. Section 45-1-205(2), MCA, provides: The failure of the public service or utility corporation to comply with the order to issue a notice in lieu of the security within thirty days after the order to issue the notice is made effective shall render the order to issue the notice in lieu of the security ineffective. (Emphasis added.) The statute is clear that it was the failure of the Public Service Commission to issue a notice in lieu of the security required as a condition to the closing of the proceeding which rendered the order to issue the notice ineffective. The respondent has not contended that it issued the notice before the order to issue the notice was effective. Instead, it argues that the failure to issue a notice was a technical defect which did not affect the substantive validity of the order. We have adopted the view that a failure to comply with the notice provisions of section 45-7-120(1)(a), MCA, is a technical rather than a substantive defect. In Lett v.
