Tanenbaum 1/2Â .Q: spring-core.jar not found in maven
I followed every bit of the instructions here to include the spring-core.jar to a spring project. I have a Service that extends ApplicationContextAware. When I load it via mvn exec:java from eclipse, everything works fine. However when I load it from maven (I can see the ctx is coming back from spring), it throws this exception: org.springframework.beans.factory.BeanCreationException: Error creating bean with name 'spinnerController': Injection of autowired

dependencies failed; nested exception is org.springframework.beans.factory.BeanCreationException: Could not autowire field: private org.springframework.ui.support.J

QueryDateEditor

spannerDialog.dateSpinner; nested exception is java.lang.ClassCastException: org.springframework.core.io.Resource cannot be cast to org.springframework.ui.j2se.SpringUI I am quite sure that I

have added the proper dependency. I have verified that using the maven dependency plugin, all jars are present in both projects (but with different versions,

which I think is normal). A
