AutoCAD is one of the most widely used 2D and 3D computer-aided design (CAD) programs in the world and has been a standard for the design and drafting of many products. AutoCAD is the world's leading AutoCAD and is the second-largest software producer in the industry. As of January 2018, AutoCAD remains the world's fastest-growing software franchise in terms of revenue. History [edit] In 1984, AutoCAD started as a CAD program that ran on mainframe computers. During the 1980s, the mainframe computers were

minicomputers. With the advent of the personal computer, CAD software started to become available on desktops. AutoCAD, however, remained a proprietary program on mainframes. In 1987, AutoCAD was introduced as an improved version of the program on a new platform. AutoCAD LT (also called AutoCAD Pro) was designed as an entry-level product to attract the students and the designers who were new to CAD. AutoCAD LT did not have many advanced features compared to the AutoCAD Pro version. For example, the shape-linking tool was not available in AutoCAD LT until the release of AutoCAD X (1994). Moreover, the drawing quality was not as good compared to AutoCAD Pro. In 1988, AutoCAD was incorporated on a more powerful, yet affordable platform — desktop computers with a built-in graphics controller. In 1992, AutoCAD was ported to the Windows operating system, and it became the first product of its kind to do

so. The 2010s [edit] After the AutoCAD 2015 release, the AutoCAD software's feature set has been changing rapidly. AutoCAD 2017 is the latest version of AutoCAD. In May 2013, Autodesk announced AutoCAD Architecture (2013), a 3D-modeling program to help architects and engineers design the infrastructure of a building. AutoCAD Architecture was released in 2014 with additional features. In October 2015, Autodesk AutoCAD 2013 was announced to be replaced by Autodesk AutoCAD 2013 SP1 as of January 2017. AutoCAD 2013 SP1 was aimed to improve the product by solving many product bugs and introducing a new design mode. AutoCAD 2014 SP1 was announced in September 2013, with the main focus of this update was to improve
