AutoCAD Activation Code LT AutoCAD LT (formerly AutoCAD for the Small Office/Home Office) is a version of AutoCAD that has been optimized for use by smaller firms and individuals. For these clients, the number of features included in AutoCAD LT is much smaller than in the standard version. Some of these features include drafting-only tools, smaller onscreen controls and reduced functionality in other areas, such as object management and change management. Autodesk discontinued the LT version in 2013. History AutoCAD was created in 1980 by Bill Gates and Paul Allen at the University of Wisconsin-Madison (UIW). It was originally called "Auton", a portmanteau of Auto-Advance, which advanced the drawing when the user was idle. Autodesk acquired a startup, Venture Design Systems, in 1983, which was a prototype for AutoCAD. The first commercially released version of AutoCAD was on December 7, 1982, for the Apple II platform. A separate AutoCAD for the microcomputer was released in 1983. By the time Autodesk released AutoCAD for the IBM PC in 1984, there were competing products available, such as MicroStation, Mach3, and Enovia; each of these products offered similar functionality to AutoCAD, but with different interfaces and varying levels of user friendliness. With the release of AutoCAD V2.0 in 1985, Autodesk began using the V-model, where the user interface is exposed through the user's graphics terminal. This setup was mandated by the NIST SP-800-38: "A Guide for Information System Selection." The NIST standard provided specifications for an interactive program that was to be used in a time-sharing computer environment. By limiting the application to the graphics terminal, the operating system was not burdened with the memory and the processing power necessary to support a complex application. AutoCAD for the Windows platform followed, but it was not designed for multi-user environments. In 1992, Autodesk released AutoCAD for the Macintosh platform, which enabled users to work on files from a single computer simultaneously. AutoCAD on Windows used the "point-and-click" interface to move around objects on the screen. By contrast, in Mac, the interface is "drag and drop." In 1989, Autodesk acquired Macromedia, which was the producer of the Flash graphic toolkit

Field of the Invention The present invention relates to apparatuses, methods and programs for processing information. More particularly, the present invention relates to an information processing apparatus, method and program, which can increase the efficiency of recording data, such as media data, in a recording apparatus. 2. Description of the Related Art Conventionally, image data for recording images on recording media, such as a DVD (Digital Versatile Disc) or a BD (Blu-ray Disc), has been encoded to use an MPEG (Moving Picture Experts Group)-4 (ISO/IEC 117211) compression format that can use either one of the MPEG-2 (ISO/IEC 13818-2) and MPEG-4 (ISO/IEC 14496-2) formats. In such an encoding format, video data is encoded into bit-plane data using an intra (intra-frame) encoding process. However, audio data is generally encoded into bit-plane data using an inter-frame encoding process (also referred to as a predictive encoding process). In addition, each image frame of video data is divided into a plurality of blocks, each of which is encoded in units of a predetermined number of bits. In recent years, it has been proposed to process audio data using a lossy compression process, such as the MP3 (MPEG audio layer-3) or AAC (Advanced Audio Coding) format, and encode audio data using an inter-frame encoding process,
