You can't really run Photoshop in the background, but Lightroom is already doing so by keeping the data online. I'm not going to promote piracy; I'm just pointing out that you can't run Photoshop off a disc, eat lunch, answer e-mail, and use the program comfortably. None of those things can happen on a portable, but you don't need it to be portable. The only other option is to assume that you'll just have to put up with unnecessary background noise for a few hours at a time. But I would not recommend it if you have something else to do during those hours. On the contrary, signing up for Photoshop CS6 using the same ID you've used in your version 5 until now, will not allow you to sign in to your Lightroom app. That will only apply to the other features of the Lightroom application. Photoshop has never failed to impress, but this latest version looks to take the title as a go-to competitor to the likes of Pixelmator. I was impressed by the features included in this one update, and excited to see how future versions develop - and will continue to improve. This new integration is just the beginning for us and it has been a huge success for customers that have been using it to advance their creative workflow. We'll continue adding features in subsequent releases to enhance the integration and bring tighter together Photoshop and InDesign. Photoshop CS for Mac is a very expensive program, but a necessary one for people who use it. It includes powerful tools for creating your own designs, for reproducing a design created elsewhere, for manipulating stock images and facial feature identification photographs, and for annotating images.
